### DETAILED ACTION

1. There are no drawings in this national stage application. Formal drawings are required in response to this action in order to avoid abandonment of the application.
2. The abstract of the disclosure is objected to because it is more than one paragraph. Correction is required. See MPEP § 608.01(b).
3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

4. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 1-2, 5-7, and 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Duhaime et al. Claims 1 and 7 are considered met by Figure 5 of Duhaime et al except that the plug 42' of Figure 5 of Duhaime et al is not a "plate". It

would have been obvious to a person of ordinary skill in the art at the time the invention was made to convert the plug 42' of Figure 5 of Duhaime et al into a "plate" as by reducing the thickness of the plug 42'. One would have been motivated to reduce the thickness of the plug 42' of Figure 5 of Duhaime et al in order to reduce the amount of material forming the plug 42' to reduce cost. Since barrier layer 48 is present in Figure 5 of Duhaime et al, the thickness of the other layers can be reduced without compromising the vapor integrity of the plug 42'. Regarding the features specified in claims 5, 6, and 11, these features would have been obvious matter of engineering design since applicant asserts no criticality in these particular features.

7. Claims 3-4 and 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Duhaime et al as applied to claims 1 and 7 above, and further in view of Hyde et al. These claims are considered met as above except for an accessory attached to the modified plug of Figure 5 of Duhaime et al. It would have been obvious in view of the vapor vent valve of Hyde et al to provide a vapor vent valve which is attached to the modified plug of Figure 5 of Duhaime et al since opening 30 of Figure 5 of Duhaime et al would have been a convenient opening for attachment of an accessory such as that disclosed in Hyde et al. Regarding claims 9 and 10, the specific method of welding would have been an obvious matter of engineering design, since applicant has asserted no criticality in the specific welding technique.

8. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3753

9. Claim 4 is further rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. There is no antecedent basis for "the accessory" in claim 4, line 1.
